todyl

ONE AGENT. TODYL COVERAGE.

What is Todyl?

Todyl is a unified, cloud-native cybersecurity platform that replaces fragmented point solutions with a single lightweight agent and console. It combines Secure Global Network (ZTNA, SWG, FWaaS, CASB), EDR, SIEM, and MDR into one Zero Trust architecture — giving lean teams and MSSPs enterprise-grade protection without the complexity or cost of managing multiple vendors.

How Todyl Works

A single lightweight agent routes traffic through Todyl's cloud-native network, enforcing Zero Trust access while EDR monitors endpoints and feeds data into SIEM for real-time visibility. SOAR then automates the response, and a 24/7 MXDR SOC actively monitors and escalates threats — all managed from one unified console.

WHO IT'S FOR

- MSPs and MSSPs wanting to consolidate their security stack onto one billable platform
- Partners replacing or supplementing VPN, standalone AV/EDR, or separate SIEM deployments
- Resellers wanting predictable recurring revenue with set-your-own-margin pricing
- Clients with remote/hybrid workforces needing ZTNA-based secure access (VPN replacement)
- SMB to mid-market clients where per-user security stack costs are unsustainably high
- MSPs wanting 24/7 SOC coverage without building their own detection and response team

KEY DIFFERENTIATORS

- All-in-one MSP platform: SASE + EDR + NGAV + SIEM + SOAR + MXDR + GRC + LZT in one agent
- Three packages: Essentials, Advanced, and Complete — partner pricing in the portal
- EDR + NGAV standalone available as a low-cost entry offering
- Replaces hardware VPN with cloud-native ZTNA/SASE: NGFW, Secure DNS, Web Proxy, SSL inspection
- MXDR included: 24/7 SOC with a named Detection & Response Account Manager
- Unlimited SOAR custom playbooks in Advanced and Complete tiers
- GRC module for streamlined compliance evidence collection
- LAN Zero Trust: Windows micro-segmentation to block lateral ransomware/APT movement
- 40+ global SASE gateway locations for low-latency secure access
- No per-client minimums, no upfront infrastructure investment

ONE AGENT, NOT TEN.

- Todyl replaces the sprawl of separate VPN, firewall, EDR, SIEM, and MDR tools with a single lightweight agent and one console — no more juggling five vendors to secure one environment.
- Designed specifically for organizations and MSSPs without the budget or headcount for a traditional, multi-vendor security operation — enterprise-grade protection at SMB-friendly complexity.
- Simplified licensing and set-your-own-margin partner pricing — no CapEx, no hardware refresh cycles, no per-client minimums.
- Most breaches don't happen because organizations have zero tools — they happen because tools are underused, misconfigured, or disconnected. Todyl's unified model closes that gap instead of adding to it.
